

ENG-Ahmed Farhat

CEO - IT manager && Laravel Developer

I am ENG-Ahmed Farhat, a web developer with five years of experience. Over this period, I have been responsible for developing a wide range of applications and systems, working four years as a back-end developer and one year as a front-end developer. My extensive experience allows me to effectively handle diverse projects, regardless of the programming languages and technologies used.

My deep expertise in various programming languages and technologies has enabled me to successfully take on supervisory roles, whether in project management or leading teams and selecting the right talent. I have consistently demonstrated my ability to deliver outstanding results and exceed client expectations, showcasing my capability to excel in any role assigned to me.

Experience

2018 - 2019	laravel Developer WanTek Gaza is a homeland tower Many affiliate e-commerce systems have been generated - and warehouse and money management systems. I worked in this company for a whole year, and among the most prominent projects I worked on was the warehouse management project and the Uni project, which was a project that adopts stores and small projects with a mechanism similar to the basket system Technology used: PHP PURE, bootstrap, html, css, api, mysql
2019 - 2021	laravel Developer Triple Zero Kuwait I worked in this company for about two years or more. One of the most prominent projects I worked on was a similar project to Careem, employee management, attendance and absence, salaries and discounts. We also worked online stores using a multi-vendor system, ie multi-merchant stores, and I was the team leader Technology used: PHP PURE , Bootstrap , html , css , api , mysql , Pusher
2021 - 2022	HR - IT manager Easymedia Kuwait I worked as the Director of the Information Technology Department and also served as a Project Manager. Over the course of my tenure, I successfully supervised multiple projects, all of which were completed on time and with high quality, thanks to effective teamwork and leadership.
2022 - Aug 2025	CEO Yone - (Global Tech) Kuwait I worked with the company as an Executive Director, fully supervising all work teams and ensuring the successful delivery of projects. I contributed to the completion of several key initiatives, including: A comprehensive management system for the Government Military Hospital in Kuwait. The official application for the Ministry of Interior in Kuwait. These projects were carried out under an outsourcing model, where I led coordination, implementation, and quality assurance to ensure client satisfaction. In addition to my leadership role, I also contributed to developing and implementing the back-end code of these projects, ensuring performance, security, and scalability. My role emphasized both technical expertise and leadership, driving project success through collaboration and innovation

Education

2019 - 2021	Website Design and Development Palestine Technical College Gaza Deir al-Balah I was working in the field of programming, so I chose this major based on my talent in programming. I graduated with honors and chose the diploma to enter the job market quickly, as some companies were demanding a university degree.
2021 - Dec 2024	Computer Information Systems Al-Quds Open University Gaza I completed a bachelor's degree at Al-Quds Open University, majoring in Computer Information Systems, with an excellent grade.

Projects

Yone E-commerce Platform A multi-vendor e-commerce application similar to an online mall. Worked as a backend developer and collaborated with a Flutter developer on building the mobile interface. The platform allows each vendor to manage multiple stores, each with its own products, categories, and customizable options. Products support mandatory and optional attributes, images, and flexible configurations. Developed with a focus on scalability, vendor autonomy, and user-friendly experience.

Multitenant Store A multi-vendor e-commerce platform developed with Laravel. Worked as a backend developer, implementing multi-domain accounts for each subscriber and managing feature access according to subscription plans. The project demonstrates scalable multi-vendor architecture and flexible subscription-based features.
